EDUCATION

Tecnológico de Monterrey (ITESM)
B.S. in Computer Science and Technology Engineering

Expected Graduation: May 2028
Academic Average: 94/100

WORK EXPERIENCE

Veeda
Senior Software Engineer

August 2026 – January 2027

- Lead an ongoing architectural migration of approximately **440 backend routes**, owning roughly **80% of the migration scope** and decomposing Veeda's legacy RPC routing monolith into modular domain-based components with the goal of fully eliminating `rpc.routes.ts`.
- Define and implement architectural boundaries across **routes, controllers, services, and repositories**, migrating business logic to the appropriate layers while preserving existing API contracts, authentication, validation, and production behavior.
- Provide technical leadership to **2 junior software engineers**, assigning migration work, reviewing pull requests, guiding implementation decisions, and enforcing testing, rollback, and staging validation standards.
- Establish migration safeguards including **PRE/POST characterization tests, HTTP route inventories, architecture-boundary tests, dependency ratchets, and staging smoke tests** to safely refactor the production backend while preventing architectural regressions.

AquaSense
Co-Founder & CTO

2026 – Present

- Co-founded and independently architected the technical platform for a multi-tenant SaaS product that transforms raw **PLC/SCADA telemetry** from water treatment plants into real-time monitoring, regulatory compliance, predictive maintenance, and chemical inventory workflows.
- Designed a high-throughput PostgreSQL time-series architecture targeting approximately **430 sensor inserts per second across 100 plants**, using range partitioning, hierarchical rollups, deadband filtering, automated retention, and idempotent processing for late-arriving data.
- Built the platform's security architecture with **PostgreSQL Row Level Security, RBAC, and SECURITY DEFINER RPCs**, including tenant isolation across partitioned telemetry tables and protected transactional workflows.
- Developed a separate **NestJS ingestion service** for heterogeneous industrial protocols including Modbus and OPC UA, together with an append-only chemical inventory ledger, alert processing, compliance reporting, and consumption-based reorder forecasting.

Coppel
Software Engineer Intern – Full Stack Development

February 2024 – May 2024

- Developed and maintained features for the **Sistema Integral de Exhibición (SIE)**, an internal platform used to manage product displays across stores.
- Built full-stack functionality using **Angular, TypeScript, PHP, and PostgreSQL**, integrating frontend components with backend services and database operations.
- Optimized **PostgreSQL functions and queries** and worked with **Microsoft Azure** services to support application deployment and existing workflows.

PROJECTS

CoachDiiaz Platform
Production Fitness Coaching Management and Client Platform

Independent Full-Stack Developer

- Independently designed and developed a full-stack platform used by **300+ clients, approximately 10 coaches, and 5 administrative users**, centralizing onboarding, training, nutrition, subscriptions, payments, and operations.
- Built multi-layer authentication and authorization with **Supabase Auth, PostgreSQL Row Level Security (RLS), and role-based access control**, supporting seven application roles and subscription-based client access.
- Integrated **Shopify, Appstle, and Telegram** through APIs, webhooks, and automated workflows with idempotent event processing, subscription state management, payment synchronization, notifications, and retry mechanisms.
- Designed a PostgreSQL architecture with **97 tables, 137+ database migrations**, RPC functions, triggers, constraints, and RLS policies, and developed a TypeScript domain architecture covered by **534 automated tests**.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Python, C++, Java, Go, Swift, SQL

Frameworks & Backend: React, Next.js, Node.js, Hono, NestJS, Express.js, Angular, Spring Boot, Tailwind CSS

Databases & Infrastructure: PostgreSQL, MySQL, Redis, Supabase, Prisma, Docker, Vercel, Railway, Microsoft Azure

Developer Tools: Git, GitHub, Linux, Bash, Bun, Turborepo, Vitest, Postman

Spoken Languages: Spanish (Native), English (C1)
